## Series ED

## Oscillator/Demodulator

The Series ED Oscillator/Demodulator is designed to simplify installation for 35 mm DIN Rail and Panel Mount applications. It provides DC-in/DC-out operation for AC LVDTs and is internally regulated for additional stability of the output signal. Optimized for 3 kHz or 7 kHz performance. A variety of voltage outputs are available as well as 4-20 mA; all with zero offset and span adjustment.

## KEY FEATURES

Works with 5 and 6 wire LVDTs
DC Voltage Output

## Internally Regulated

Small Size and Low Cost
